We recently landed some improvements for the Quick Open Modal [here](#). These changes caused some issues for project search and file search, which we should clean up:

- close button
- general layout imbalances

Project Search

File Search

The issue is the `.search-field .close-btn`'s `margin-top`; we may need to axe it completely. We may also need to add the "big" classname to the `QuickOpenModal`

AlexMolodyh commented 5 days ago

Does this happen for every browser version or just specific ones?

I was trying to reproduce this in the latest version of Firefox and couldn't get it to reproduce.

jasonLaster commented 5 days ago

Contributor

@AlexMolodyh this is only in github locally. We havent landed this bug in firefox yet

AlexMolodyh commented 5 days ago

Contributor

@jasonLaster - I guess I'm a little confused about how to recreate this issue then. Is this not a firefox debugger issue?

jasonLaster commented 5 days ago

Contributor

it is :)

checkout the getting setup instructions <http://github.com/devtools-html/debugger.html/>

I should mention that there will be four of us working on this issue for our Open Source class at Western Oregon University. In our team we have:

- Alex
- Michael
- Rahevin
- and Me Alexander.

We have the debugger set up but what I'm wondering is what do you mean by locally on Github?

jasonLaster commented 4 days ago

Contributor

@AlexMolodyh are you in our slack <https://devtools-html-slack.herokuapp.com/>? would you like to do a quick call?

AlexMolodyh commented 4 days ago

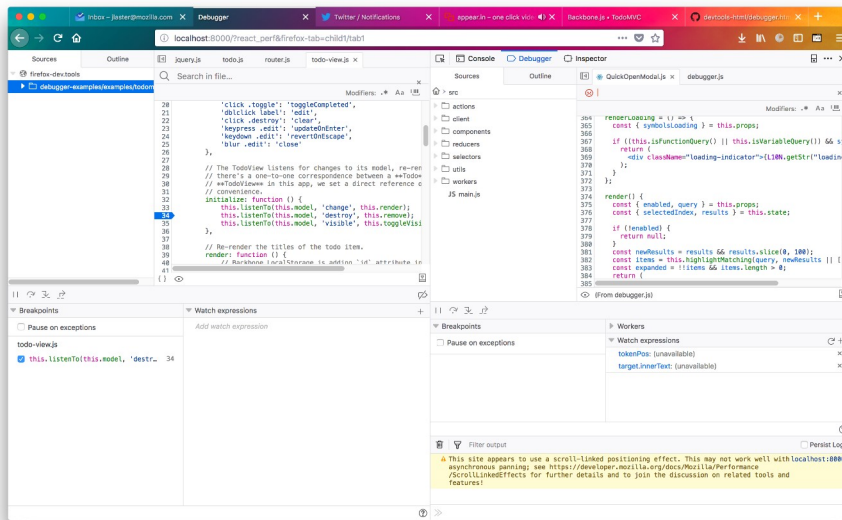

Contributor

@jasonLaster - Yes, that would be great. When would you have time?

I can't seem to reproduce the issue on my hp laptop. Would this be a mac specific issue? Here's a screenshot of it.

AlexMolodyh commented 4 days ago

Contributor

@jasonLaster - Reproduced the issue on my home machine but it wouldn't show up on my laptop because the `.search-field .close-btn margin-top` was 7px not 12px. As @darkwing suggested, should `.search-field .close-btn` be removed completely from it then? Also, should we add the "big" classname to the `QuickOpenModal`?
