Steps to reproduce:

- Have the debugger and console open in DevTools with the split screen like so:

- Drag the splitter for the toolbar with the breakpoints.

- Drag, and continue moving the mouse clearly into the webconsole screen.
- Release the splitter in the webconsole screen.
- Move the mouse back into the debugger screen

Expected results:

- The splitter should no longer move.

Actual results:

- The splitter continues to move, even though I am no longer depressing on the mouse.
- I must click on the mouse to release it.

@gregtatum - Any idea where the event handlers are located for this splitter? I've looked through a few file but can't seem to locate it. Or would you say this click event is handled by the DOM?

jasonLaster commented 17 days ago

Member

@AlexMolodyh I believe the splitter is here <https://github.com/devtools-html/devtools-core/blob/master/packages/devtools-splitter/index.js>

@jasonLaster - Any Ideas on how to reproduce this in the debugger? I can reproduce it in the browser and it only seems to happen with the console pane being open, other screens don't affect it.
